

Type	Audible Pattern	Example	Key Acoustic Features	How It Differs from Others
Sound Repetition (Part-word repetition)	Rapid repetition of first sound	b-b-b-ball	Short repeated bursts (100–300 ms), similar waveform pattern, small gaps between repetitions	Repeats only phoneme, not full syllable
Syllable Repetition	Repetition of full syllable	ba-ba-baby	Repeated syllable energy blocks, clear vowel repetition, longer than phoneme repetition	Entire syllable repeated
Prolongation	Stretched sound held for long duration	sssssnake	Continuous sustained frequency band, extended phoneme duration (1–5 sec), stable spectral band	No repetition, just extension
Block (Silent or Audible)	Sudden stop before word, may include tension	——ball	Silence >500 ms before word OR strained low-energy airflow, sudden burst onset	No sound during silent block
Interjection (Filler)	Inserted extra sound or word	um... I think	Mid-frequency stable tone, nasal vowel (“um”), short pause before/after	Added word, not repetition
Phrase Repetition	Repetition of multiple words	I went to — I went to the store	Repeated long waveform segment, similar prosody and pitch contour	Multi-word repetition
Cluttering	Very fast, unclear, compressed speech	iwenttothestore	High syllable rate (>6–7 syll/sec), reduced vowel duration, irregular rhythm	Rate-based dysfluency, not repetition
Normal Speech	Smooth continuous flow	I went to the store	Stable rhythm, natural pauses, no abnormal repetitions or prolongations	Baseline fluent speech
